

Usability testing results

Double Modifier Incrementor Sauced Wings

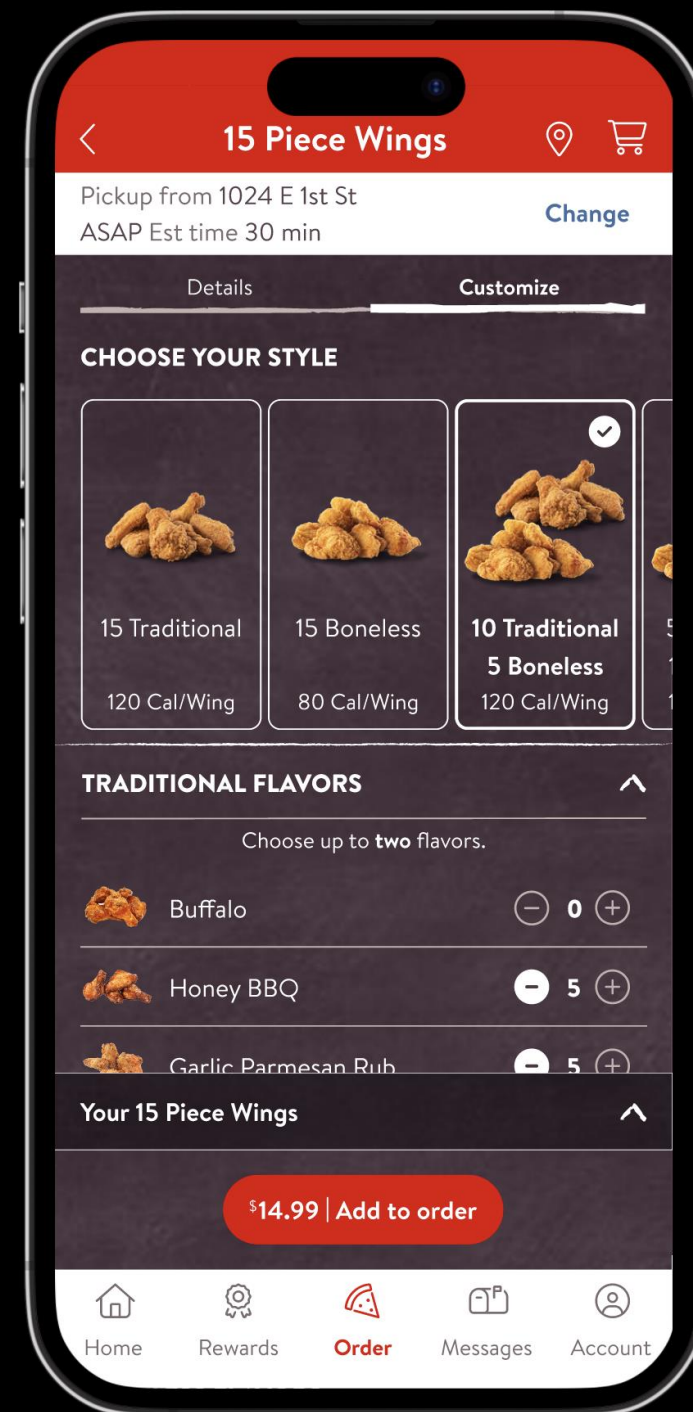

Study overview

Participants

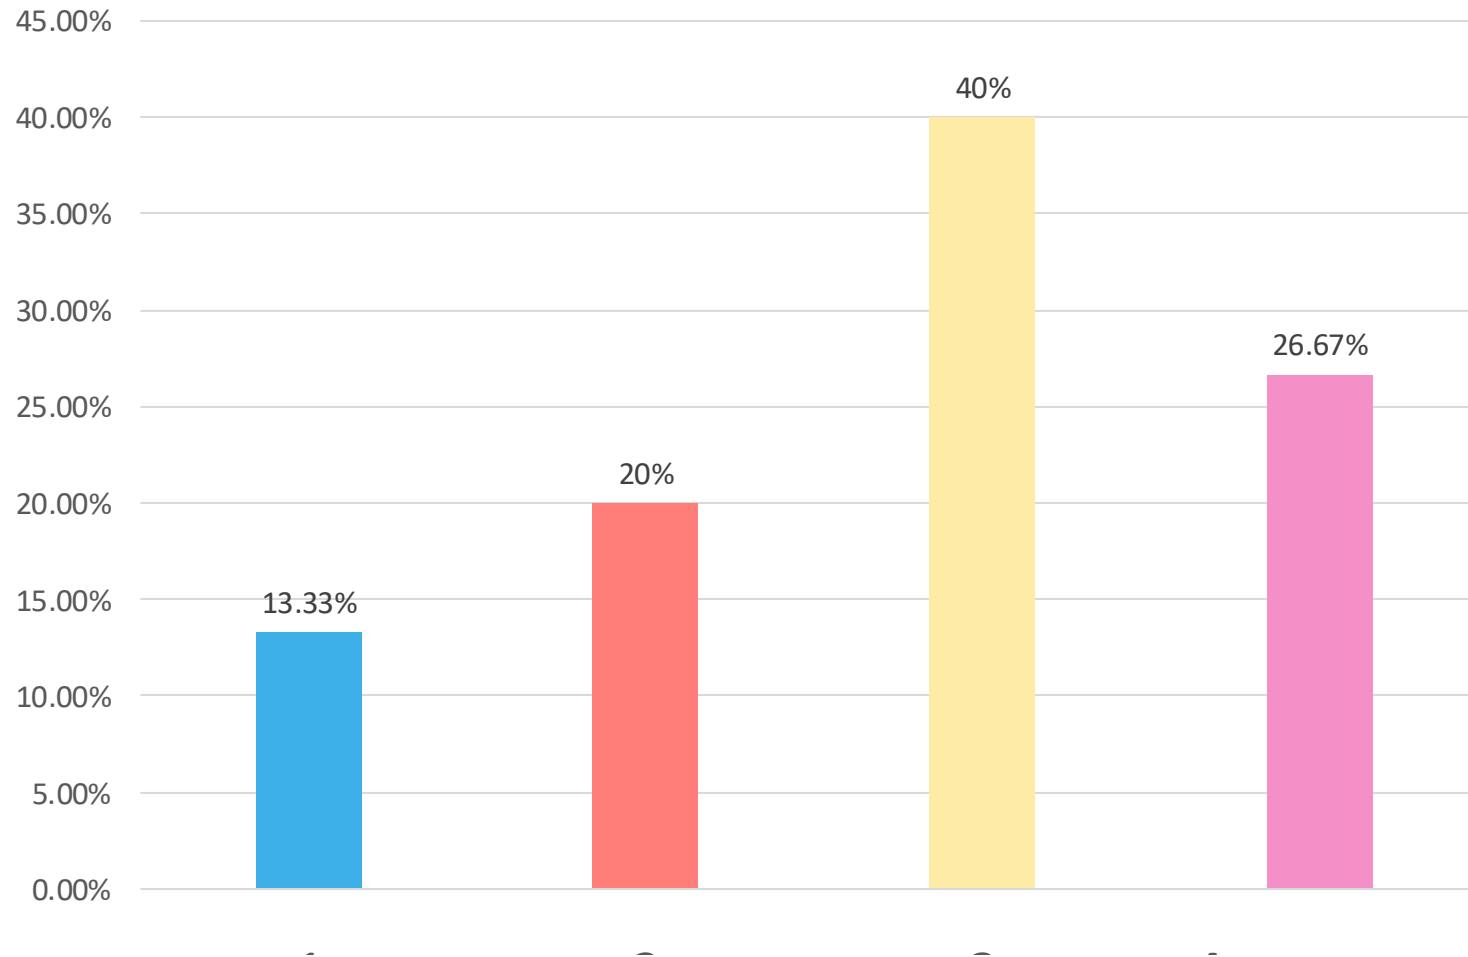

15 Userlytics panel members who have previous ordered wings online

Tasks

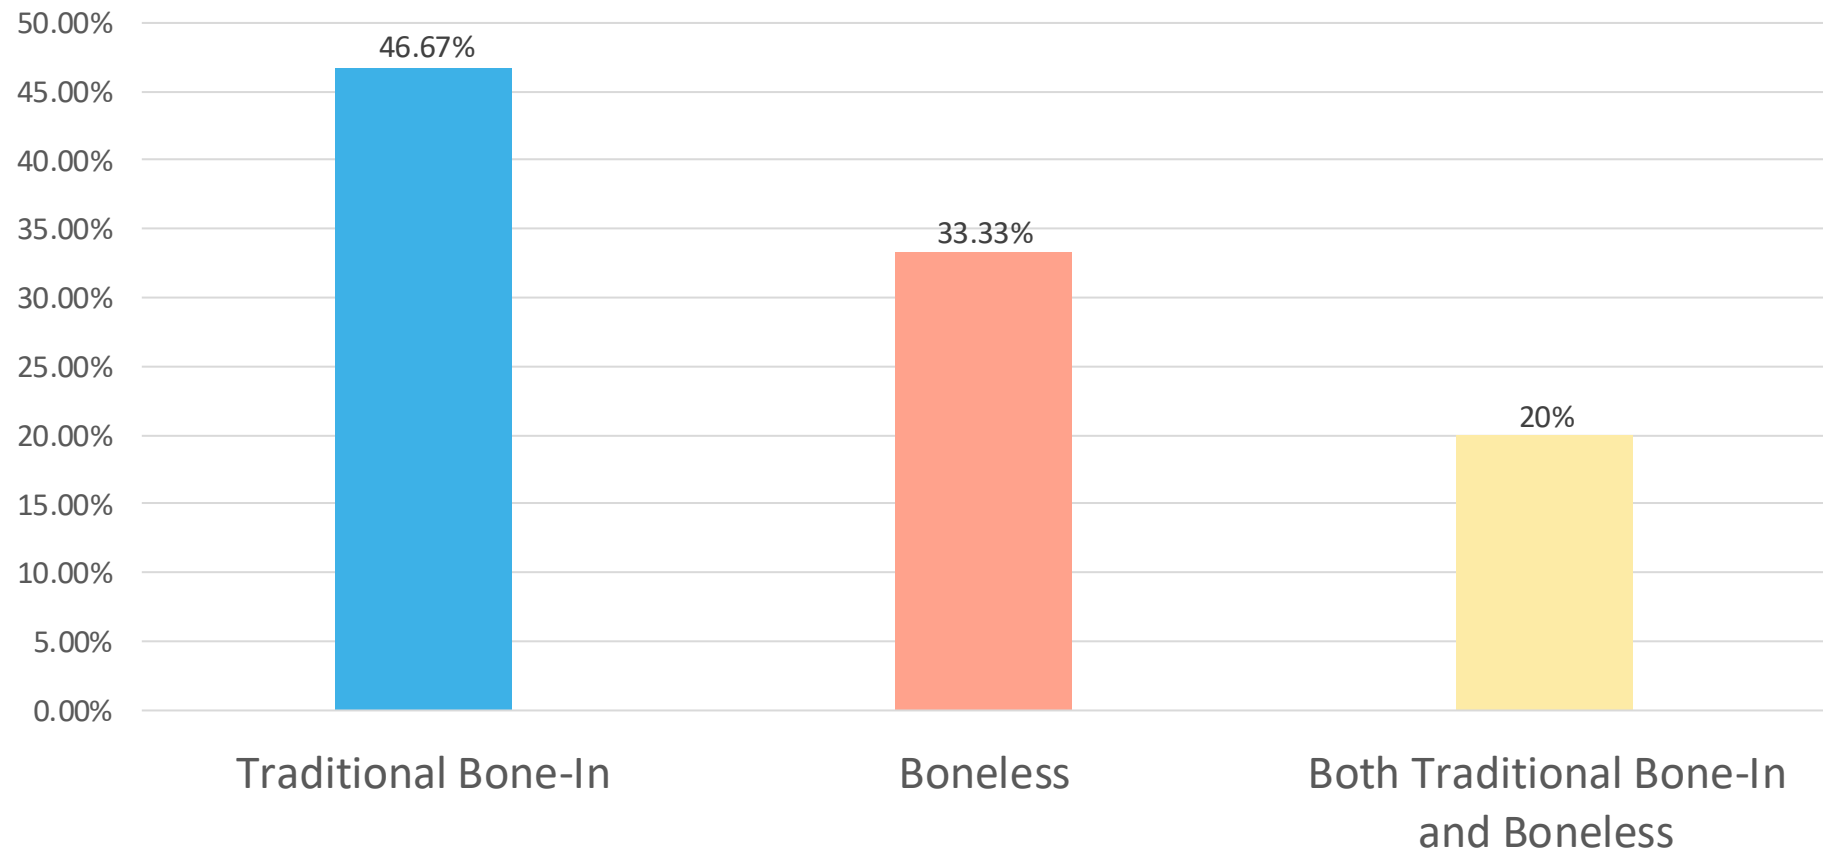

1. Overview of wings page
2. Place a 10 Traditional/5 Boneless wings order
3. Describe how many of each wing you will get
4. Feedback on experience
5. Comparison to other wings experiences

How many different flavors do you usually order in an average wings order?

What style of wing do you order the most?

How do you know how many of each wing you are ordering?

“It shows it on the screen next to the flavor and goes up in 5’s” Mark H

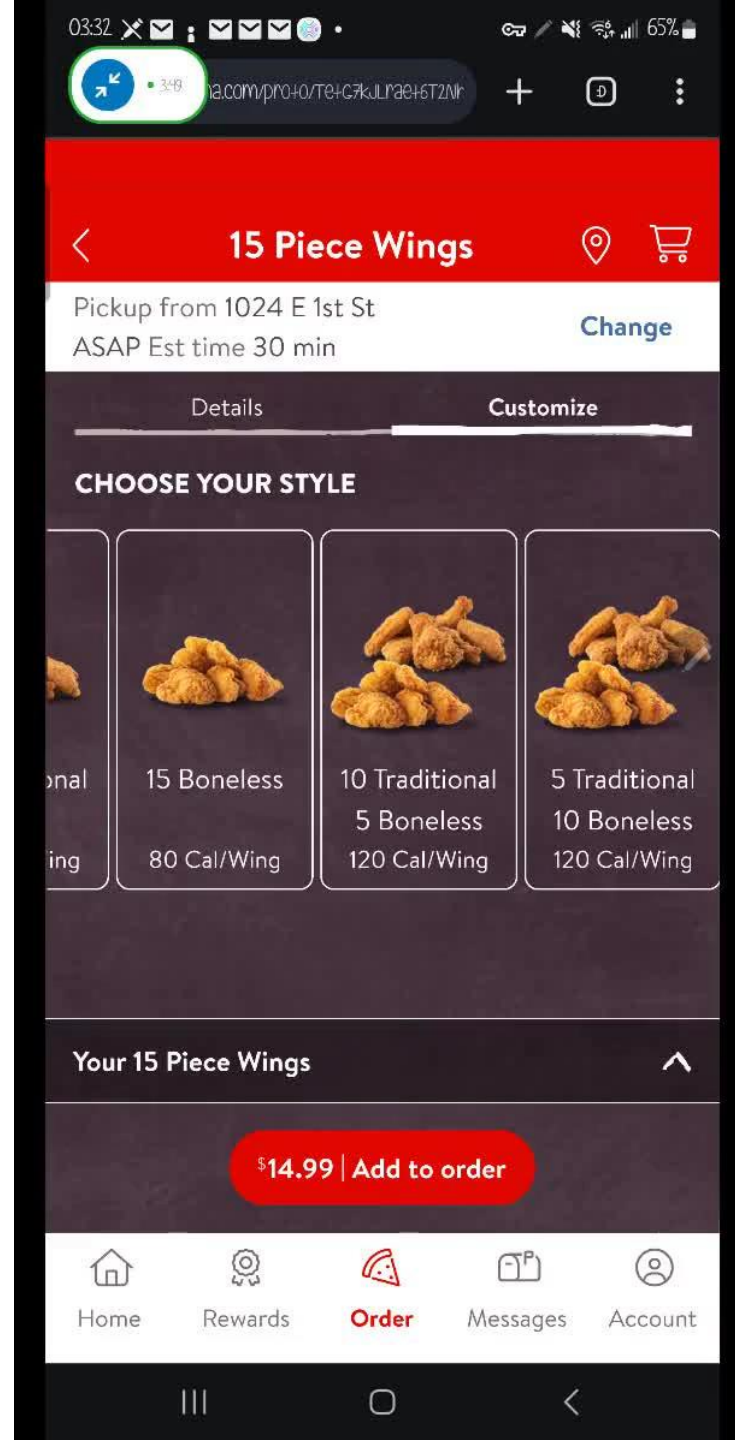

“There are buttons showing plus/minus, in multiple with 5, so we can order 5, 10, 15 etc..” Divya T

“I know how many wings I am ordering, because there is a wings counter that allows me to select the number of wings I want for each flavor.” Mickael H

Wing counts

Raegan B

Easier for her to do a split half and half equally because her and her son eat the same amount.

What is the difference between ordering Traditional, Boneless, 10 Traditional/5 Boneless, and 5 Traditional/10 Boneless wings?

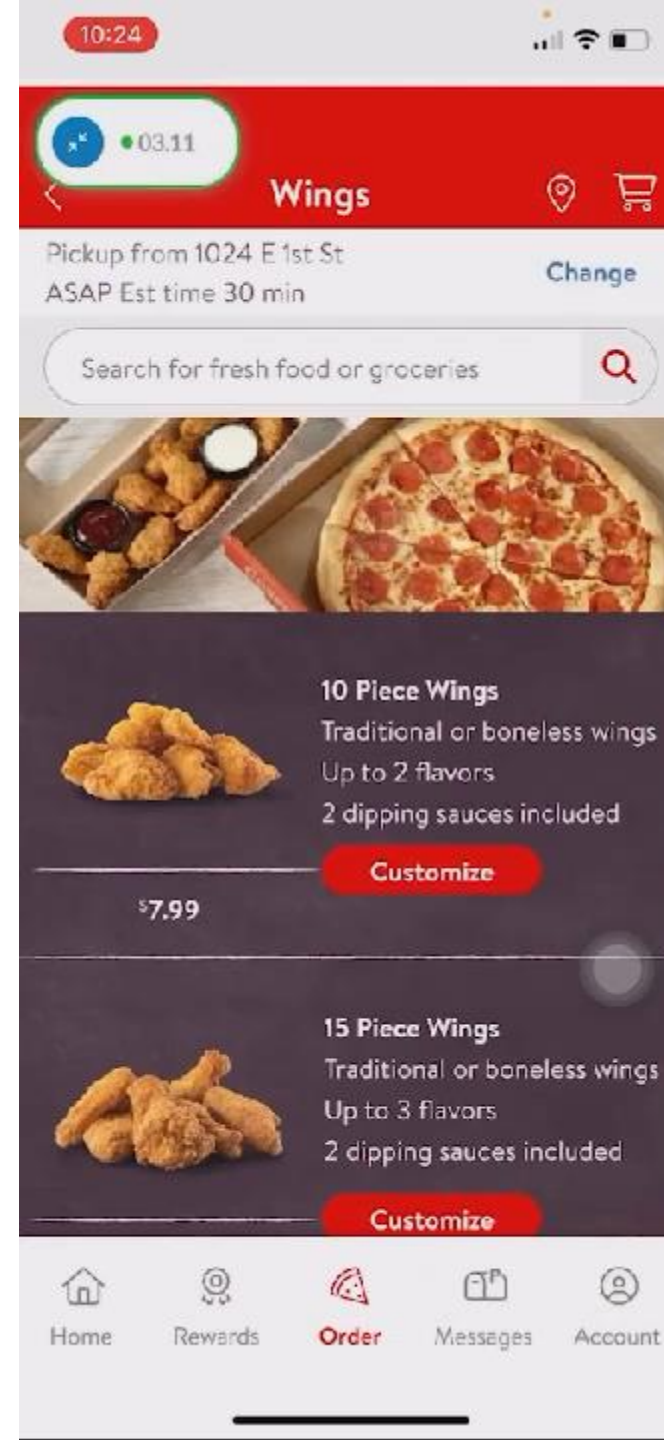

“Ordering traditional means that you are getting 15 bone in wings. Ordering boneless means you are getting 15 boneless wings. The split means you are getting that amount either bone-in 10, 5 boneless or reversed for a total of 15 wings. No matter what you are getting 15 wings it just depends on what kind of style.” Kassandra P.

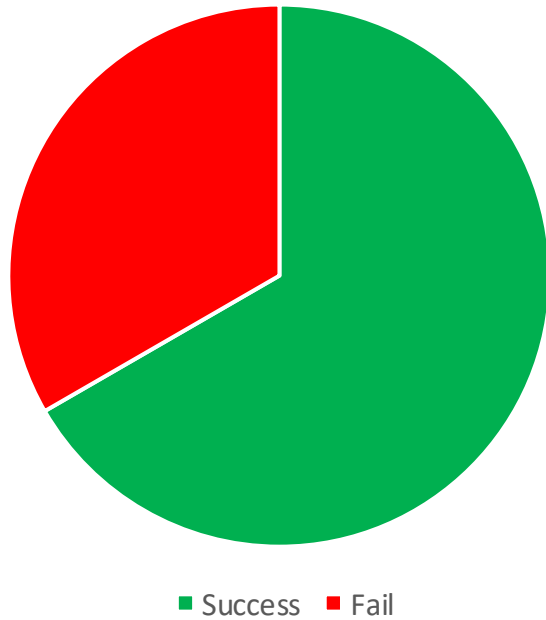

Selecting wings

Giang N

Giang was able to successfully place the correct order given the instructions.

Rate of success: 10/15

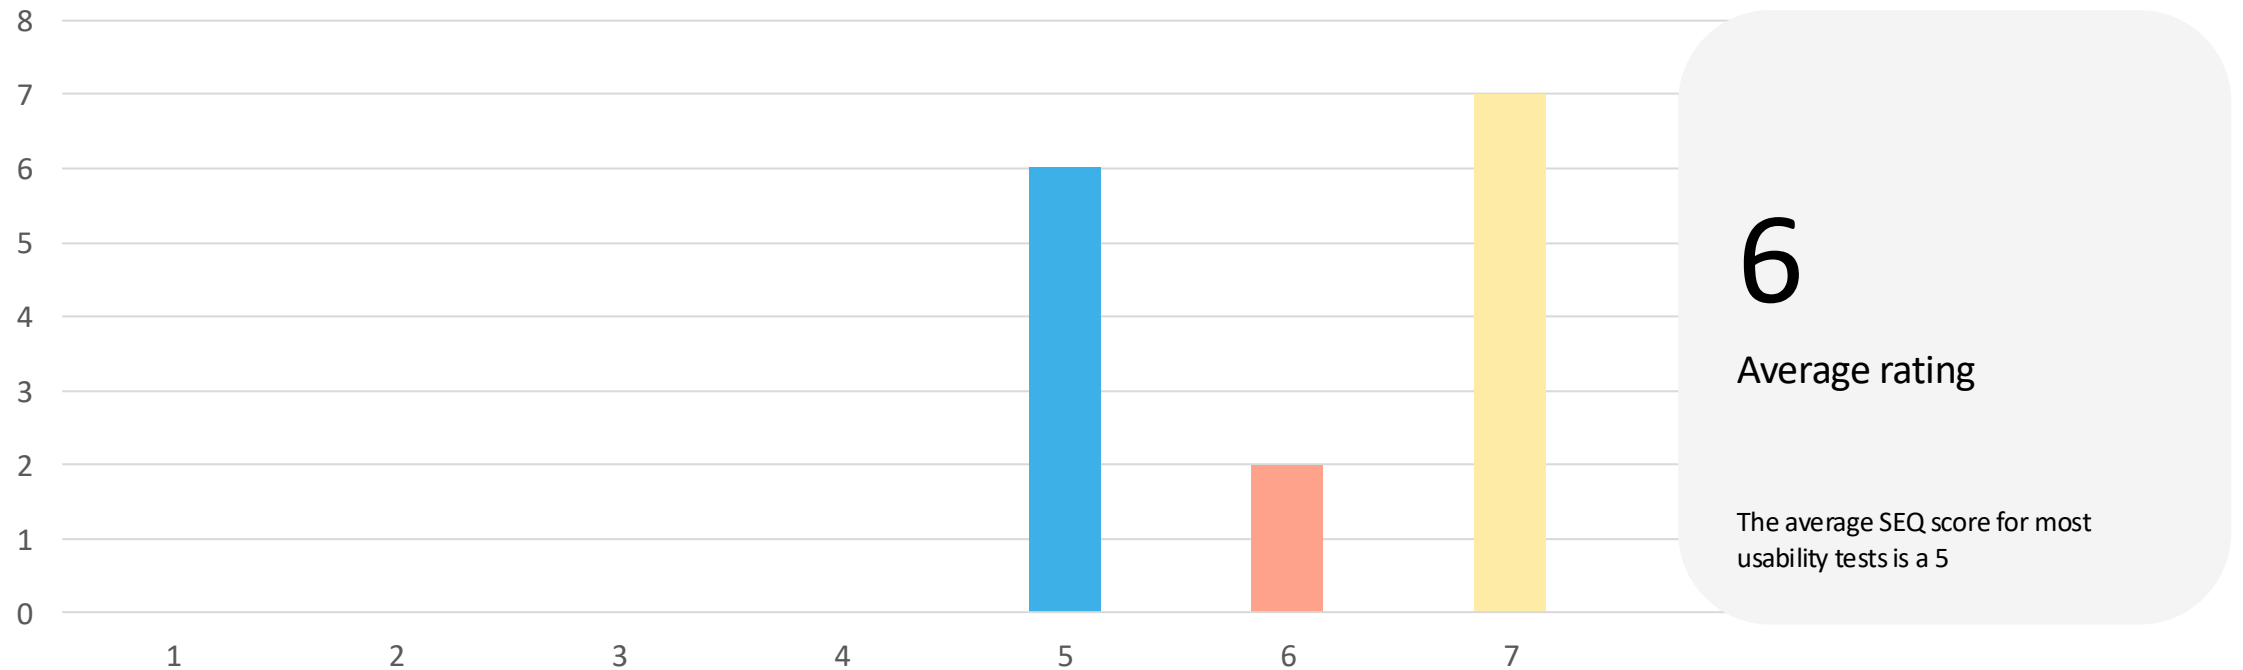

Reasons for failure

2 Ordered all traditional

2 Didn't tap "Add to order" button

1 Tried to place Traditional and Boneless in separate orders

Overall, how difficult or easy was the task to complete?

Likes

“What I liked about the experience is the fact that I can mix and match any combinations of wings that I want. I can also customize the flavors of wings that I like for each order of 5 wings.” Mickael H

“I enjoyed the scrolling up and down through flavors. I’ve had issues with Pluckers and Buffalo Wild Wings scrolling side to side not registering what I’m doing; where as the (scrolling) up and down like Wingstop works great.”
Kassandra P.

Dislikes

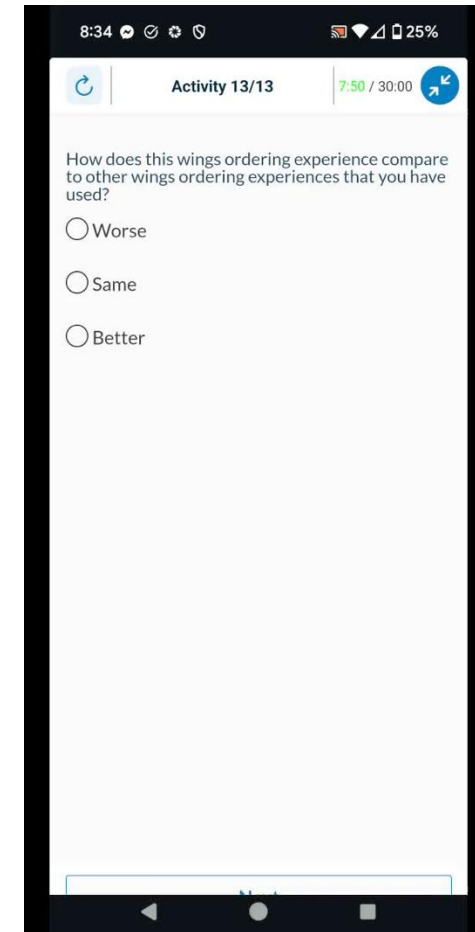

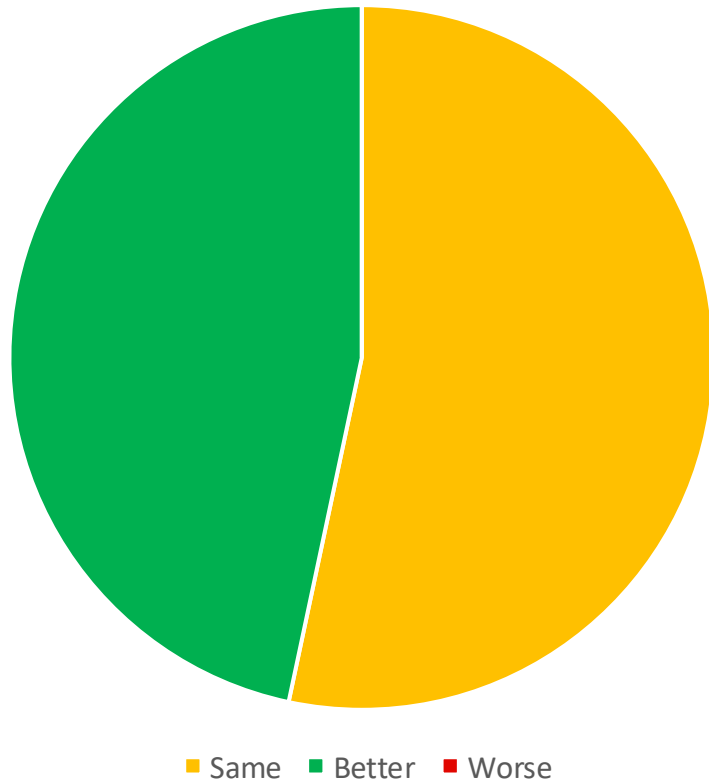

“I thought that the **flavoring** of the wings initially **wasn't apparent** based on the interface that was provided. I **didn't expect** the number of sauces to **update to 5** when adding the wings to the different sauces.” Nathan B

“**Not able to customize the number of wings** for each style in the mix order.”
Giang N

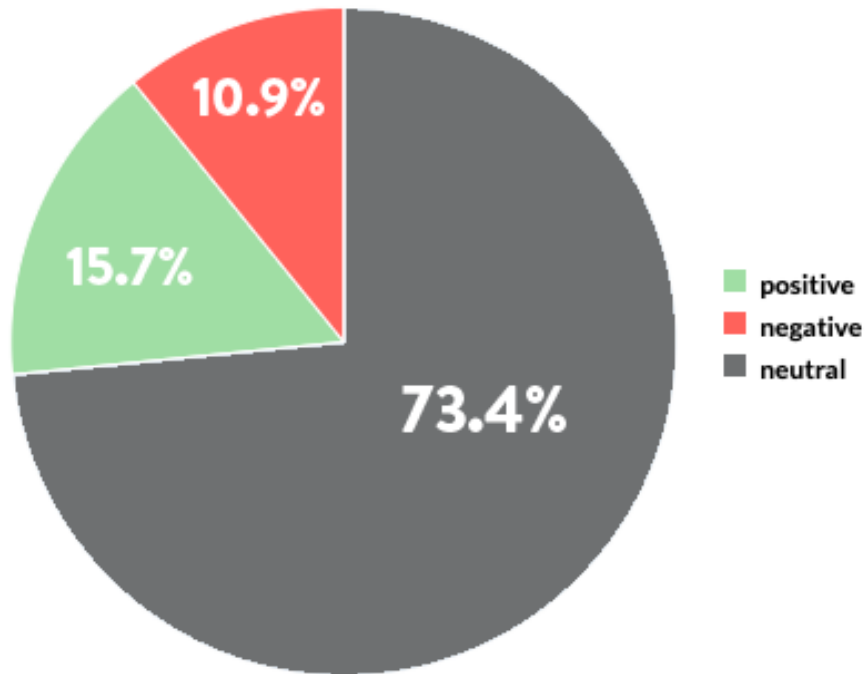

“That you **can only pick in 5 piece increments**. You can't do like 2 of one flavor, 2 of another.” Jennifer K

“The **inability** to specifically **customize the type of wings** I wanted (I. E. 6 boneless 9 traditional)” Reagan B

How does this wings ordering experience compare to other wings ordering experiences that you have used?

Insights generated with AI UX Analysis

Navigation: Consider user preferences for vertical scrolling over horizontal scrolling when selecting flavors.

Flavors: Offer a wider variety of flavors to cater to users who enjoy exploring different options.

Labeling and descriptions: Improve the clarity of the interface when presenting options for traditional and boneless wings in certain order combinations.

Flexibility in customizing: Allow custom quantity of each flavor and type of wing, allowing users to specify their preferences more precisely.

UX recommendation

We have our winner!

The study has shown that while there is desire for more customization in quantity, nearly all testers were able to complete the task successfully and all knew how many wings they would get.
